Introducing Heavy Duty, Corrosion Inhibitor Shrink Wrap

Alsip, IL -- Companies needing heavy duty protection for equipment and excess inventory stored outdoors are choosing Daubert Cromwell's X-O Wrap to keep it clean, dry, and corrosion-free. Using wide-width VCI shrink wrap is proving to be faster and more economical than putting it under roof.

New X-O Wrap is a flexible, durable, puncture-resistant film with exceptional protection qualities for machinery that is stored or transported outdoors. Available in widths up to 32 feet, and up to 10 mils thick, it is the ideal packaging for large and irregularly shaped machinery. The heat shrinkable film conforms easily to the shape of the metal part. No additional exterior packaging is required.

Choose from two types of corrosion inhibitor shrink wrap:

- Premium Metal-Guard® X-O Wrap. Corrosion inhibitors in the film keep multi-metal parts free of rust, dirt, dust and moisture.
- Ferro-Film® X-O Wrap. Heavy duty barrier film with corrosion protection for ferrous metals.

When corrosion protection is not critical, Daubert X-O Shrink Wrap keeps the load secure without need for additional banding or strapping. The heat-sealable film works as a high strength barrier against moisture, dirt and contaminants.

Daubert Cromwell and its on-site installation partner, Protective Packaging, can provide complete turnkey service, from initial evaluation to final delivery and application. For more information, contact Daubert Cromwell at 800-535-3535, or Protective Packaging, at 800-945-2247.
