Nox-Rust® Transit Coatings Protect Exposed Metal Surfaces

ALSIP, IL – Manufacturers of large equipment often need economical, effective rust preventive liquid coatings to protect metal surfaces between factory and delivery. With the shift away from environmentally unsafe coatings, valuable metals become vulnerable to rust and the resulting expensive rework. Hose fittings and connectors, for example, are susceptible to corrosion when in harsh environments typical of export shipments.

To meet the growing concern among these quality-conscious manufacturers, Daubert Cromwell has developed a series of Transit Coatings to protect metals stored and shipped outdoors. New Nox-Rust 3100 Series liquids protect metal and most painted surfaces during domestic and international shipment. When properly applied, Nox-Rust Series 3100 liquids will prevent damage from sea water, acid rain, insects, bird droppings, smoke, pollution, dirt, and debris.

The three liquids in the Daubert Cromwell category of Transit Coatings are:

Nox-Rust 3100 – This easy-to-use liquid can protect metals stored outside for 5+ years. In salt fog testing, the most rigorous ASTM standard for measuring the effectiveness of corrosion protection, Nox-Rust 3100 outlasted the competition in salt fog and humidity testing. Results prove it is the best choice for protecting equipment and machinery during domestic and overseas shipments.

Nox-Rust 3100G -- New Nox-Rust 3100G has the same excellent corrosion protection properties as Nox-Rust 3100, in a thicker consistency that clings to vertical surfaces. It adheres to the metal to provide an even layer of protection on large, heavy, or hard-to-reach metal parts. Apply by spray or brush.

Nox-Rust 3400 -- Wax-based, amber color, low VOC film is also an ideal choice for 5-year outdoor protection. This solvent-based, dry, firm, corrosion preventive liquid can be applied by spray, brush, or dip methods.

About Daubert Cromwell

Since the 1940s, the Daubert companies have set industry standards in corrosion prevention packaging. Today Daubert Cromwell VCI products are used in automotive, heavy equipment, electronics, military, and fabricated metal markets worldwide. It has operations in USA, Germany, China and Mexico, with distribution and manufacturing networks in 36 countries
